

■ CONSULTING WITH AN EDGE

TradeTech helps businesses achieve their vision of operational excellence. Serving corporations, financial institutions, asset managers, and insurance companies, TradeTech's offering ranges from consulting to outsourcing. Everything we do serves a single purpose: to help our clients free up time to focus on what really matters - their business.

In a nutshell

TradeTech Consulting's expertise covers the entire business, ranging from temporary in-sourcing, project management and execution, to complete outsourcing of entire support and business functions. We also offer custom software development, from complete systems to focused customizations. Our combination of business and technical skills opens unique possibilities.

Areas of expertise

For strategic and hands-on expertise in the fields of treasury, capital markets and business intelligence TradeTech Consulting is a trusted partner. We offer a broad range of services focused on boosting efficiency, providing stability and maximizing our clients' profitability.

Treasury

Managing a complex and highly specialized treasury environment requires a high level of expertise that can be tricky for a corporate treasury to attract and even more difficult to retain. Our treasury experts have a minimum of five years of treasury experience, from a business as well as a technical

perspective. They continuously develop their skills through hands-on experience and formal training.

Capital Markets

Within the segments of Capital Markets and Asset Management we offer technical as well as business expertise. All of our consultants have an in-depth understanding of the underlying business processes and most have more than 10 years practical experience. We take on projects in the Front, Middle and Back office ranging from technical development to process development to interim senior management.

Business Intelligence

Business Intelligence (BI) provides a better overview of your business by providing a means for data found in separate systems to interact. With BI you can extract data from disparate sources, merge it in a data warehouse, and produce reports containing exactly the information you need. Our consultants are specialized in business intelligence solutions for treasuries, asset managers and capital markets professionals.
